

AM Marriage Hall Management System

Project General Documentation

1. Project Overview

This software helps run a wedding hall business. It keeps track of bookings, customers, and food menus. It also counts the business money. The application uses a secure framework called **Laravel**.

2. Admin Features (What the Manager Sees)

The manager uses a central dashboard to control the business.

Main Dashboard

- View all hall updates in one place.
- Look at daily sales and total bookings.

Booking Management

- Save the exact date and time for events.
- Match a customer to a specific hall.
- Pick the food menu for the party.
- Track if a booking is pending or approved.

Menu Control

- Create custom food menus for events.
- Add or change food items easily.
- Assign specific food plates to bookings.

Customer Records

- Save customer names and phone numbers.
- View the booking history for each client.

Money Reports

- See total revenue earned by the hall.
- Turn money files into printed **PDF reports**.

Hall Control

- Add new event halls to the system.
- Set prices for morning or evening shifts.
- Check which halls are free or busy.

3. Customer Features (What the Guest Sees)

Customers can view the website from their mobile phones or computers.

Hall Profiles

- See beautiful photos of the wedding halls.
- Read important details about each venue.

Easy Pricing

- Look up hall rental costs.
- Check if a specific date is open.

Food Menus

- View the available food deals.
- Compare menu prices per guest.

★ Reviews Section

- Rate the hall using a star system.
- Write feedback about their event experience.
